
THE **SUREVIEW*** THREADED ROD CONNECTOR

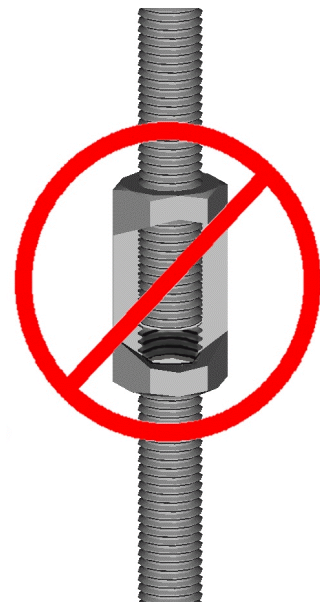

ARE YOU SURE THAT YOUR HOLDOWNS WILL WORK?

How many connectors are in the field with insufficient threads to provide the *assumed* strength? Each day the industry gets more thorough about how well holdowns and anchor bolts are installed and inspected. Now is the time to include the threaded rod connectors.

Some connectors currently marketed require very close inspection, sometimes with a mirror and flashlight to see that the rods are installed to a predetermined depth. With the **SUREVIEW*** connector, it is easy to see the bright orange dot from 10 to 15 feet or more!

The **SUREVIEW*** threaded rod connector has a positive stop at the center of the coupler and a soft fluorescent orange silicone indicator. The orange silicone indicator has been designed such that it will not extrude out until compressed from both ends by the threaded rods.
